WORK EXPERIENCE

Front End Engineer
QOMPLX, Inc

01/2019 - Present   *Reston, VA*

- Develop user interface and functionality for QOMPLX:OS platform (Universe) to support core user interactions and account & identity access management.
- Developed and maintain UI component libraries (private npm packages) with ~25 components which are used in several products of QOMPLX:OS.
- Migrated application styling framework from Vue-material to Vuetify resulted in writing less custom styles, less redundant class names and reducing build size by ~20% .
- Built and shipped UI of multiple products (~4) within a tight deadline of 45-60 days.
- Improved performance of the Keycloak IAM templates by ~75% using techniques like lazy loading, minifying & bundling files, caching following metrics like web core vitals with Lighthouse.
- Serve as a member on the interview panel for Front End Engineer role and so far interviewed ~30 candidates.

Front End Engineer
Pépulab

09/2017 – 09/2018   *Cincinnati, OH*

A start-up founded with a mission to develop a platform that connects hourly job seekers and hiring managers.

- Translated UI/UX design wireframes to live visual elements of the application.
- Refactored source code down to 35% of its original size for an entire application.
- Utilized RxJS library to load data asynchronously and perform data operations on the fly which boosted application performance by ~15%.
- Optimized the application for speed and scalability with page load times less than ~2 seconds.
- Fixed bugs and memory leaks with periodic code reviews among peers following the agile methodology which resulted in ~55% boost in performance on mobile devices.

Freelance Web Developer
Self-Employed

08/2016 – 08/2017   *Cincinnati, OH*

Worked on several projects as a freelancer on Freelancer and Fiverr

- Introduced clients to cutting-edge graphic design solutions that increased page hits, new customer acquisition and retention, and sales by as much as 20%.
- Performed the duty of fixing the technical issues related to the designing and programming of ~6 websites.
- Successfully optimized and refactored a client website for speed, scalability, and search engine which improved page rank by ~75%.

PROJECTS

Weather React   *iamsainikhil.com/weather-react*

- Built an application to display the 24 hour & 7-day weather forecast for any location in the world using Dark Sky and Algolia services.
- Secured application API keys by deploying serverless cloud functions written in NodeJS & Express on Vercel which make API requests to the above services and relay responses to the Front-end application.
- Starred ~68 times and forked ~15 times on GitHub.
- Developed this application using HTML, SCSS, JavaScript, React, and NodeJS.

Gatsby Prismic Blog Starter   *gatsby-prismic-blog-starter*

- Developed this starter template to let any user easily create a blog using Prismic as the CMS.
- Downloaded ~900 times on NPM.
- Accepted into the official Gatsby's starter collection.
- Developed this starter using HTML, CSS, JavaScript, React, Gatsby and Prismic.
